Thanks Lynn, I think your instinct to keep it high level is good. I don't want this to lead to a discussion of exposure factors! I'll take it out and can elaborate on differences between his analysis and ours if pressed.

Well, I was leaving it up to you! My first thought was that if you should pick one way or the other----simple and general comments about their analysis or go into detail and be complete. I was thinking the former was better and keeps it more clean. You don't want to get sidetracked in the fine details.

Ex. 5 Deliberative Process (DP)

I hate to see you getting hung up on this part, you know?
Bottom line is I am not sure.....

Great! Thanks for the explanation of the RPF issue. Makes sense!

Thanks Lynn for your comments (I love specific comments!). I think your edits on slide 20 are really good.

Kathleen: The presentation is very good! I like how you simplified the overall summary slides so that they aren't just like what you used last time and will allow you to go through this part quickly—while still covering the assessment for those who may not have participated in the teleconference.

Slide 20 is hard to get the right tone for. Lots of things I would like to say seem inflammatory...

Hi,

Here are the proposed slides for Kathleen's presentation at next week's peer review meeting. I want to note that we received a note from the SAB that: The panel chair made a suggestion that EPA should not repeat the same presentation from the teleconference, but make use of the opportunity to clarify certain points or address potential points that maybe coming subsequent to our previous teleconference." This was our plan anyway and you'll see that the focus of these slides is to address the questions raised during the teleconference from the panel and public commenters.

I am also attaching the comments from Brian Magee on the dermal slope factor...we are struggling with how to address his comments without getting into a big discussion about exposure assessment territory. Any thoughts!?!
